

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion

Salesforce CRM Project Documentation

Table of Contents

I. Project Overview

- Introduction to HandsMen Threads

II. Objectives

- Project Goals and Benefits

III. Phases

Phase 1: Requirements and Data Model

- Business Requirements (Centralized Data, Loyalty, Inventory, Automation)
- Data Model Design (Objects: Customer, Product, Order, Inventory, Campaign)
- Relationships (Lookup and Master-Detail Links)
- Formula Fields (Full Name and Stock Status)

Phase 2: Backend Configuration and Automation

- Validation Rules (Order Amount, Stock Quantity, Email Validation)
- Email Templates (Order Confirmation, Low Stock, Loyalty Program)
- Email Alerts and Flows (Automation Logic)
- Apex Triggers (Custom Code Automation)

Phase 3: App, UI, Security, and Users

- App Manager and Navigation
- Profiles, Roles, and Permission Sets

IV. Conclusion

Project Summary and Personal Reflection

I. Project Overview

The HandsMen Threads project is a Salesforce CRM system built for a men's fashion company. It helps the business manage all its important information in one place, including details about customers, products, orders, and inventory stock levels. The main goal of this CRM is to make the company's work easier by improving how it tracks sales and automating tasks like sending order confirmation emails, which reduces manual work and helps the business run more smoothly.

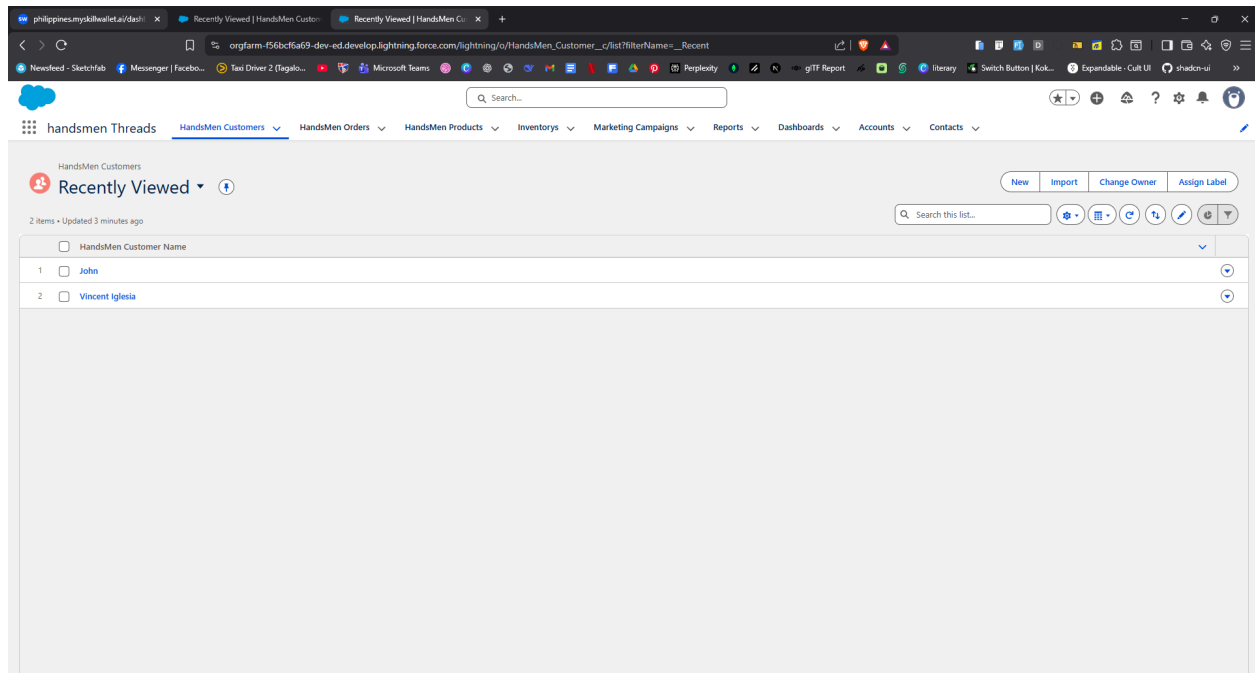

Figure 1. HandsMen Threads app dashboard

II. Objectives

The main goal of this project is to organize and automate the HandsMen Threads business so it runs more efficiently. We want to improve customer management by storing all contact details and tracking loyalty status like Gold or Silver in one place. Another objective is to track products and inventory accurately so we never sell items that are out of stock. We also aim to automate important emails, such as sending order confirmations and low stock alerts, to save time and reduce mistakes. Finally, we want to control system access securely by using profiles and roles, ensuring that the sales, inventory, and marketing teams only see the data they need.

The screenshot shows the Salesforce Object Manager interface. At the top, there's a navigation bar with 'Setup', 'Home', and 'Object Manager'. Below this, a table lists custom objects. The table has columns: LABEL, API NAME, TYPE, DESCRIPTION, LAST MODIFIED, and DEPLOYED. There are three objects listed: HandsMen Customer, HandsMen Order, and HandsMen Product. Below this table, there are two more tables showing additional objects: Marketing Campaign and Inventory.

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
HandsMen Customer	HandsMen_Customer_c	Custom Object		11/22/2025	✓
HandsMen Order	HandsMen_Order_c	Custom Object		11/22/2025	✓
HandsMen Product	HandsMen_Product_c	Custom Object		11/22/2025	✓

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Marketing Campaign	Marketing_Campaign_c	Custom Object		11/22/2025	✓

LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Inventory	Inventory_c	Custom Object		11/22/2025	✓

Figure 2. Custom Objects

III. Phases

Phase 1 – Requirements and data model

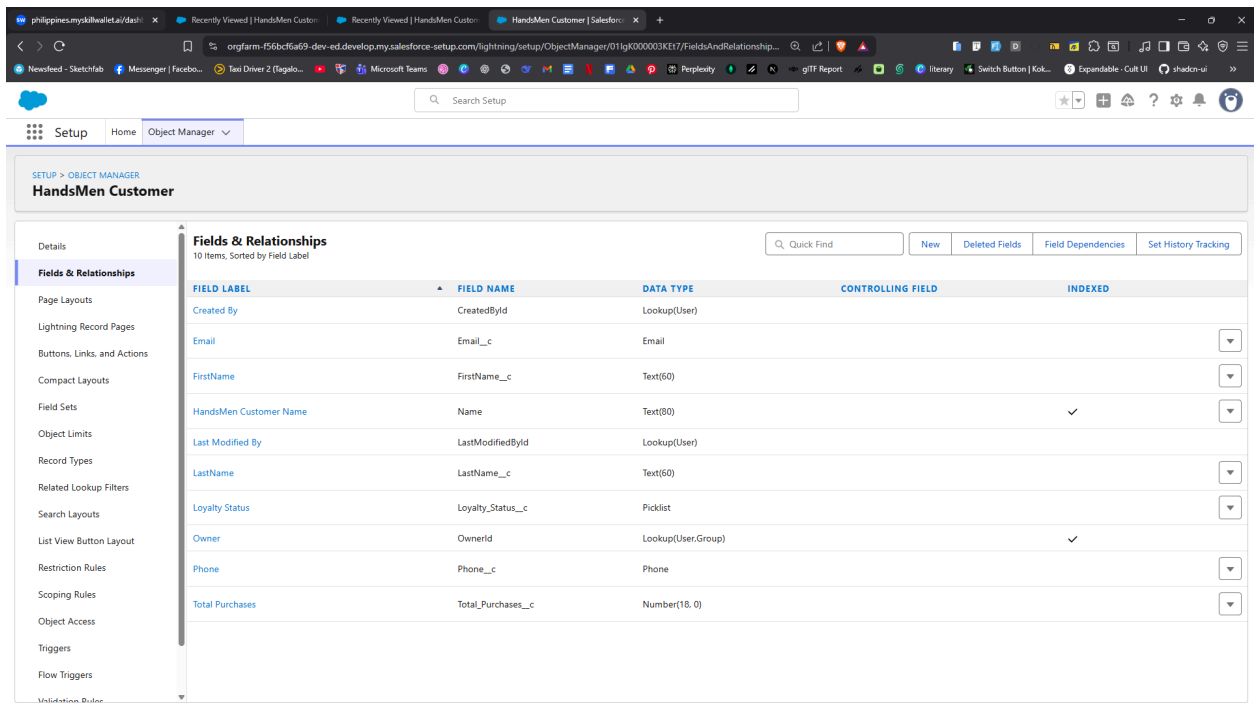

1. Business Requirements

- **Centralized Customer Data**
 - HandsMen Threads needs a single system to store all customer information, including contact details and purchase history, so the Sales team can easily identify and assist clients.
- **Loyalty Management**
 - The business wants to track loyal customers (Gold, Silver, Bronze status) to offer them special perks and keep them coming back.
- **Inventory Tracking**

- The Inventory team needs to see stock levels in real-time to prevent selling items that are out of stock and to know when to reorder products.
- **Order Automation**
 - The system must automatically send email confirmations to customers when they place an order, reducing manual work for the Sales team.
- **Marketing Campaigns**
 - The Marketing team needs a way to plan and track campaigns (like seasonal sales) to attract more customers and boost sales.
- **Access Control**
 - The Admin needs to ensure that employees only see the data relevant to their job—for example, the Inventory team shouldn't be able to change marketing campaigns.

2. Data Model Design

HandsMen Customer – This object is used to store all important information about our customers. It helps us know who they are and how much they buy.

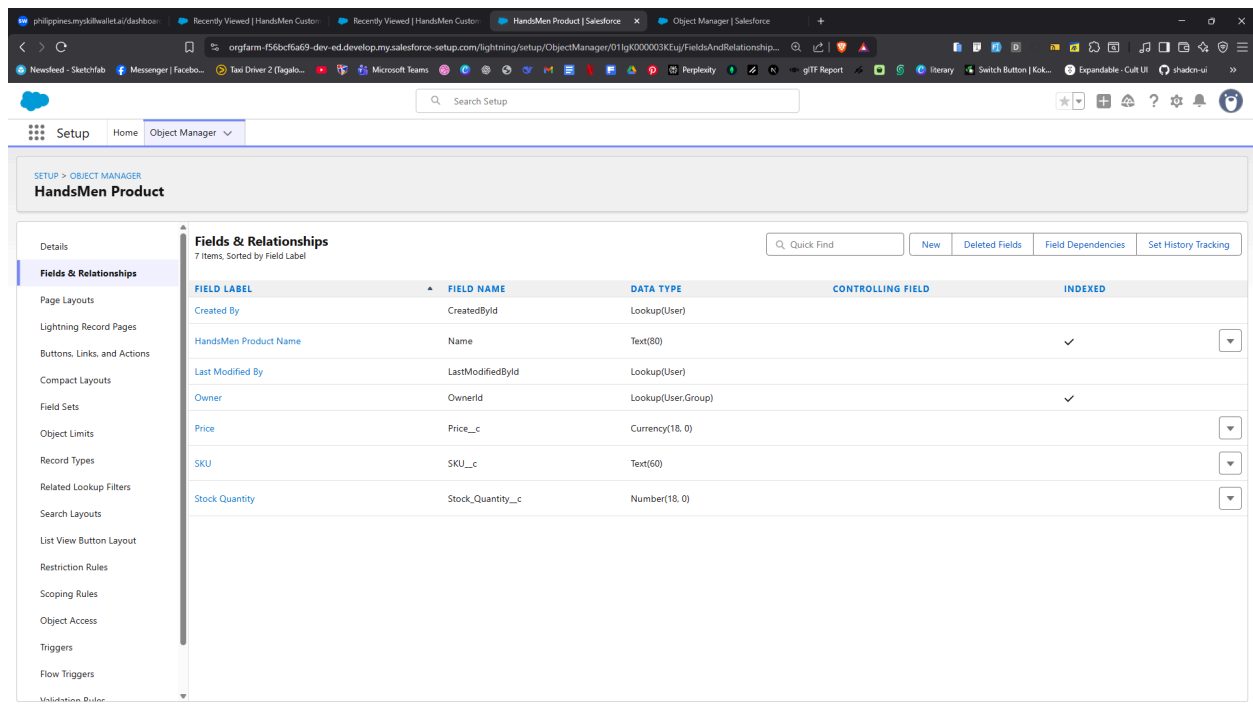

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
Email	Email__c	Email		
FirstName	FirstName__c	Text(60)		
HandsMen Customer Name	Name	Text(80)		✓
Last Modified By	LastModifiedById	Lookup(User)		
LastName	LastName__c	Text(60)		
Loyalty Status	Loyalty_Status__c	Picklist		
Owner	OwnerId	Lookup(User.Group)		✓
Phone	Phone__c	Phone		
Total Purchases	Total_Purchases__c	Number(18, 0)		

Figure 3. HandsMen Customer Fields and relationships

(First Name, Last Name, Email, Phone, Loyalty Status (Gold, Silver, Bronze), Total Purchases, and a Full Name formula that combines first and last names.)

HandsMen Product – This object stores details about the clothing items we sell. It helps the business keep track of what products are available.

The screenshot shows the Salesforce Setup interface for the 'HandsMen Product' object. The 'Fields & Relationships' section is active, displaying a list of 7 fields sorted by label. The fields are: Created By, HandsMen Product Name, Last Modified By, Owner, Price, SKU, and Stock Quantity. Each field entry includes its label, name, data type, controlling field, and whether it is indexed. The 'HandsMen Product Name' field is highlighted in blue.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
HandsMen Product Name	Name	Text(80)		✓
Last Modified By	LastModifiedById	Lookup(User)		
Owner	OwnerId	Lookup(User.Group)		✓
Price	Price__c	Currency(18, 0)		
SKU	SKU__c	Text(60)		
Stock Quantity	Stock_Quantity__c	Number(18, 0)		

Figure 4. HandsMen Product Fields and Relationships

(SKU, Price (Currency), and Stock Quantity.)

HandsMen Order – This object records every purchase made by a customer. It tracks the progress of an order from start to finish.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
Customer Email	Customer_Email__c	Email		
HandsMen Customer	HandsMen_Customer__c	Lookup(HandsMen Customer)		✓
HandsMen OrderNumber	Name	Auto Number		✓
HandsMen Product	HandsMen_Product__c	Lookup(HandsMen Product)		✓
Last Modified By	LastModifiedById	Lookup(User)		
Owner	OwnerId	Lookup(User,Group)		✓
Quantity	Quantity__c	Number(18, 0)		
Status	Status__c	Picklist		
Total Amount	Total_Amount__c	Number(18, 0)		

Figure 5. HandsMen Order Fields and Relationships

(Order Number , Status (Pending, Confirmed, Rejected), Quantity, Total Amount, and Customer Email.)

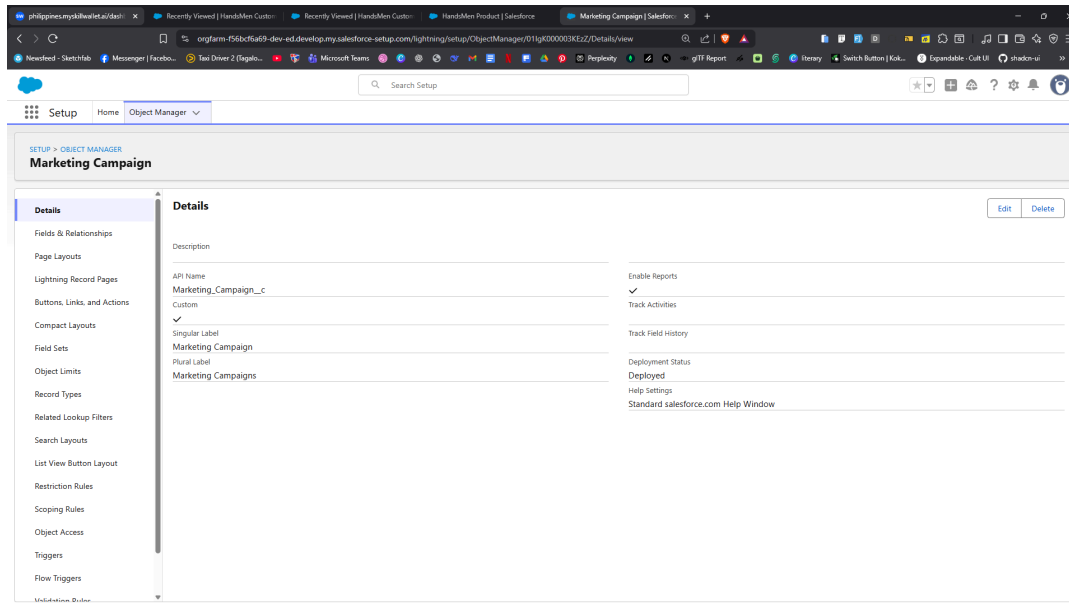

Inventory – This object tracks the stock levels of our products in different warehouses. It helps prevent us from running out of items.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
HandsMen Product	HandsMen_Product__c	Master-Detail(HandsMen Product)		✓
Inventory Number	Name	Auto Number		✓
Last Modified By	LastModifiedById	Lookup(User)		
Stock Quantity	Stock_Quantity__c	Number(18, 0)		
Stock Status	Stock_Status__c	Formula (Text)		
Warehouse	Warehouse__c	Text(50)		

Figure 6. Inventory Fields and Relationships

(Inventory Number, Warehouse, Stock Quantity, and a Stock Status formula: Available / Low Stock.)

Marketing Campaign – This object manages our sales and advertising events. It helps the marketing team plan when campaigns start and end.

*Figure 7. Marketing Campaign Fields and Relationships
(Marketing Campaign Number (Auto Number), Start Date, and End Date.)*

3. Relationships

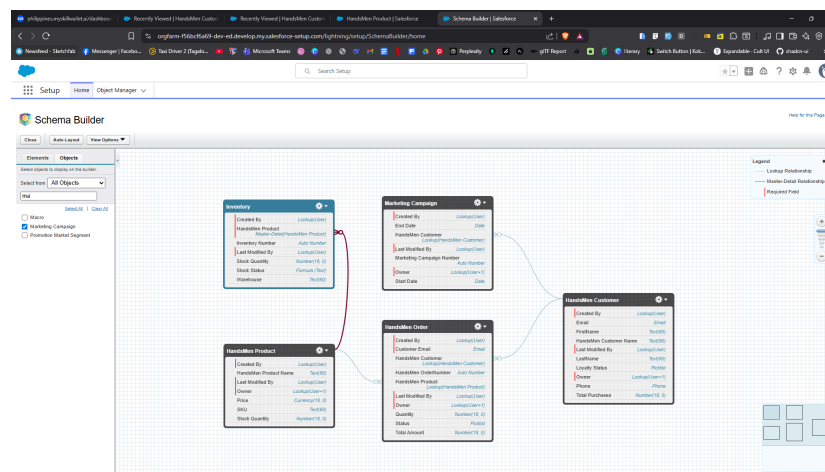

Figure 8. Schema Builder

(Shows the Lookup and Master-Detail relationships connecting Customer, Product, Order, Inventory, and Marketing Campaign objects.)

- **Marketing Campaign → HandsMen Customer** (Lookup)
 - This relationship links a specific marketing campaign to a customer so we know which customers are part of which promotion.
- **HandsMen Order → HandsMen Product** (Lookup)
 - This connects an order to a product, allowing us to see exactly which item a customer is buying.
- **HandsMen Order → HandsMen Customer** (Lookup)
 - This links an order to the customer who made it, so we can track purchase history.
- **Inventory → HandsMen Product** (Master-Detail)
 - This creates a strong link where inventory records belong to a product. If a product is deleted, its inventory records are also deleted automatically.

4. Formula Fields

We used formula fields to make the system calculate important information automatically, so we don't have to do it manually.

Formula for Full Name (on HandsMen Customer)

This formula takes the customer's "First Name" and "Last Name" and joins them together with a space in between. This creates a single "Full Name" field that is easier to read on reports and screens.

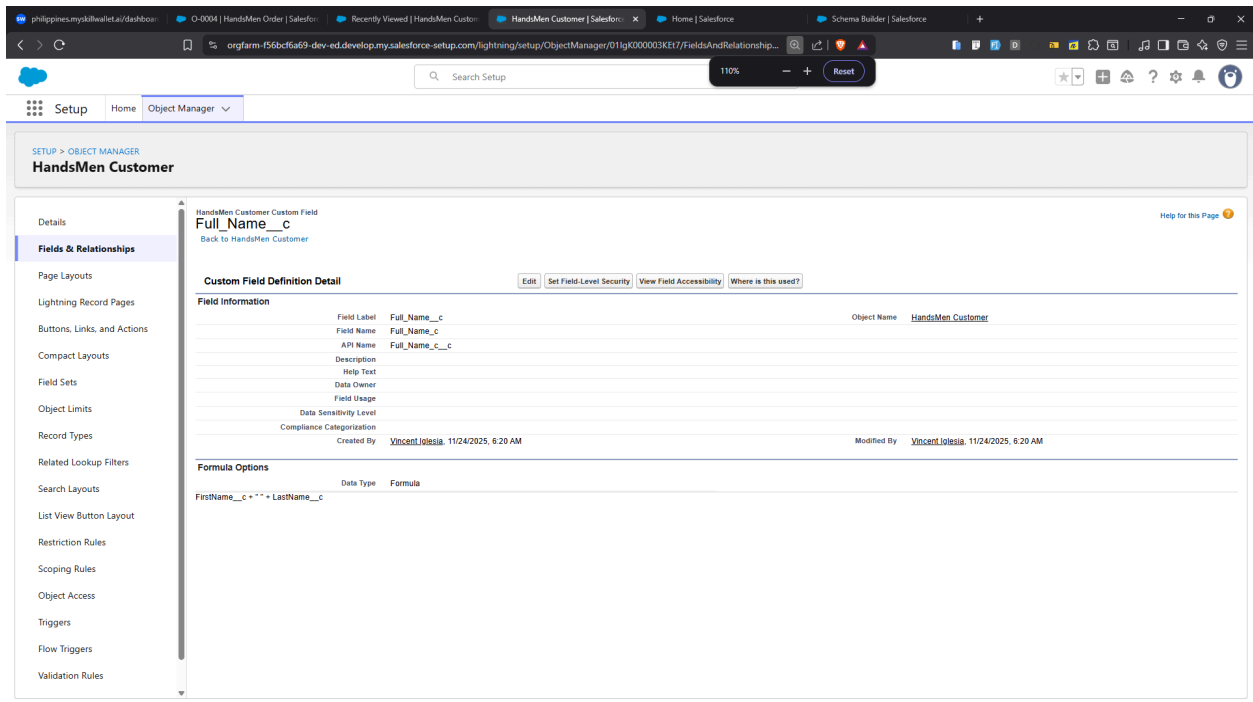

Figure 9. Full Name Formula Setup

Formula for Stock Status (on Inventory)

This formula checks the "Stock Quantity" number. If the stock is greater than 10, it automatically displays the word "Available." If the stock is 10 or less, it displays "Low Stock." This helps the inventory team quickly see which items need attention.

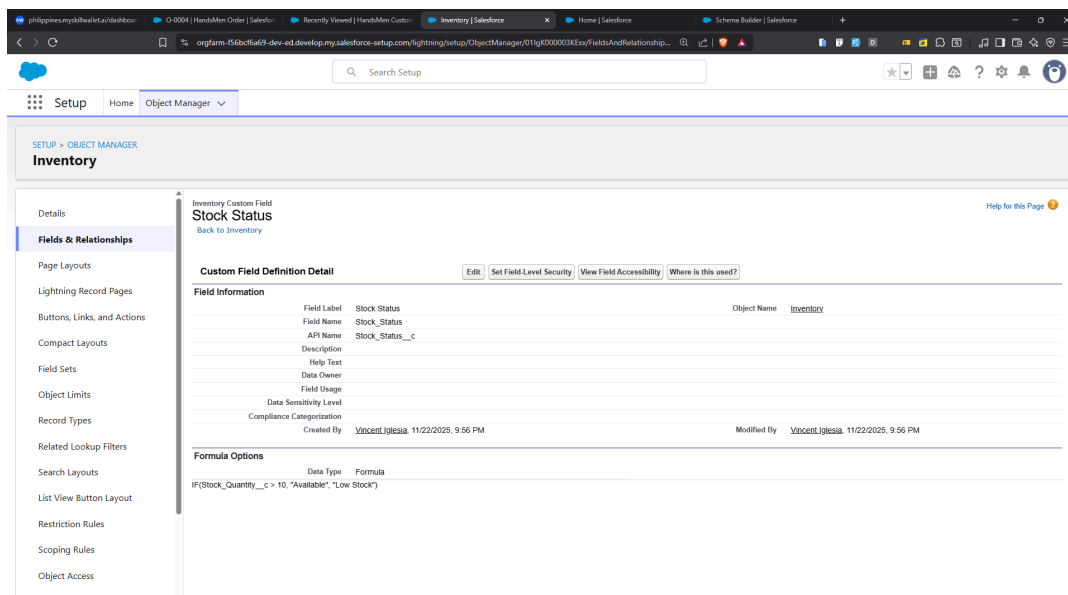

Figure 10. Stock Status Formula Setup

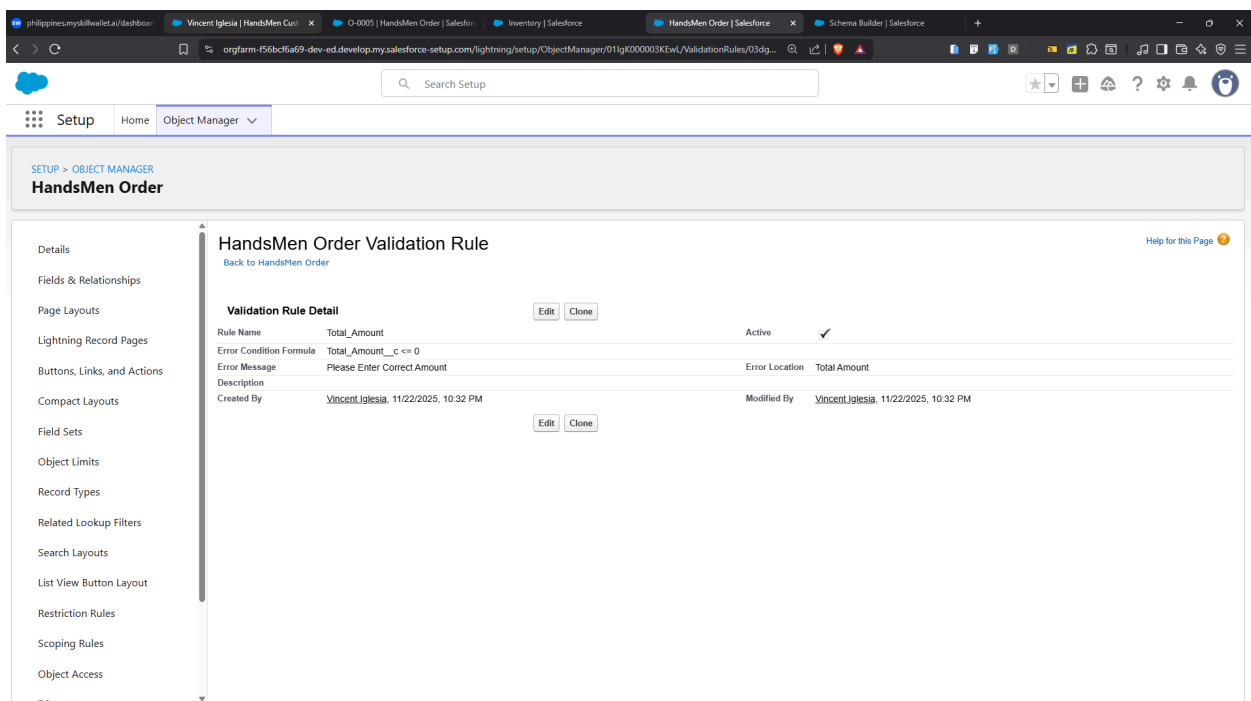

Phase 2 – Backend configuration and automation

1. Validation Rules

We created validation rules to stop users from saving incorrect data. These rules show an error message if the data entered doesn't meet our requirements.

Total Amount on HandsMen Order

- It ensures the "Total Amount" is not zero or a negative number ($\text{Total Amount} \leq 0$).
- Error Message: "Please enter correct amount."

*Figure 11. Total Amount Validation
(Shows the rule preventing orders with \$0 or less.)*

Stock Quantity on Inventory

- It prevents the "Stock Quantity" from being zero or negative ($\text{Stock Quantity} \leq 0$) because we cannot have less than zero items.
- Error Message: "The inventory count is never less than zero."

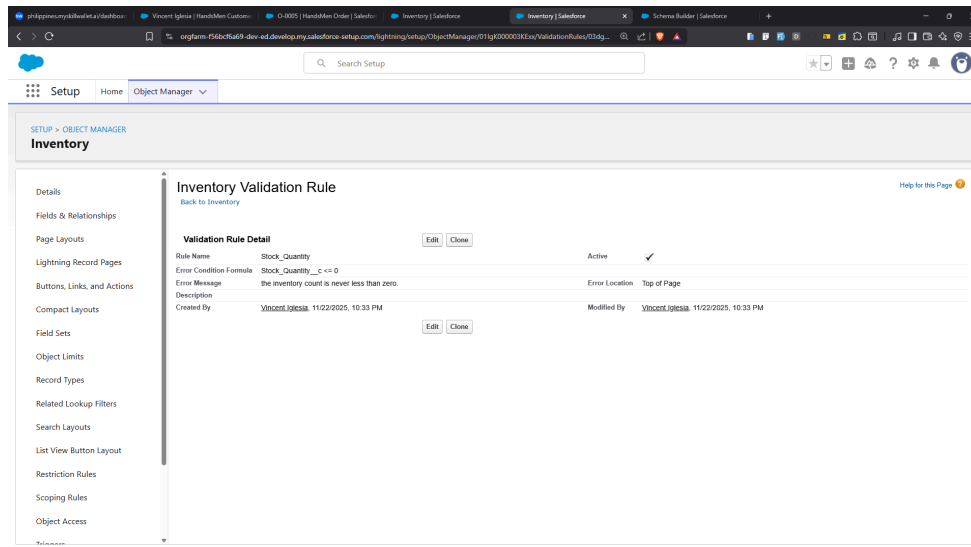

Figure 12. Stock Quantity Validation

Email on HandsMen Customer

- What it checks: It requires the customer's email address to include the text "gmail.com" to ensure it is a valid personal email.
- Error Message: "Please fill correct Gmail."

The screenshot shows the 'New HandsMen Customer' form with the following fields and values:

- HandsMen Customer Name:** Vincent Iglesias
- Email:** vincent.iglesia07@S.com
- Phone:** 09203341360
- Loyalty Status:** --None--
- FirstName:** (empty)
- LastName:** (empty)
- Total Purchases:** (empty)

An error message is displayed: "We hit a snag. Review the errors on this page. Please fill Correct Gmail." The error is associated with the Email field.

Figure 13. Email Validation

2. Email Templates

We created three email templates to communicate automatically with customers and our internal team.

Order Confirmation Email

Type: HTML (using the "HandsMen Threads" Classic Letterhead).

Subject: "Your order has been confirmed."

- This email is automatically sent to the customer to let them know their order was successful and is being processed.

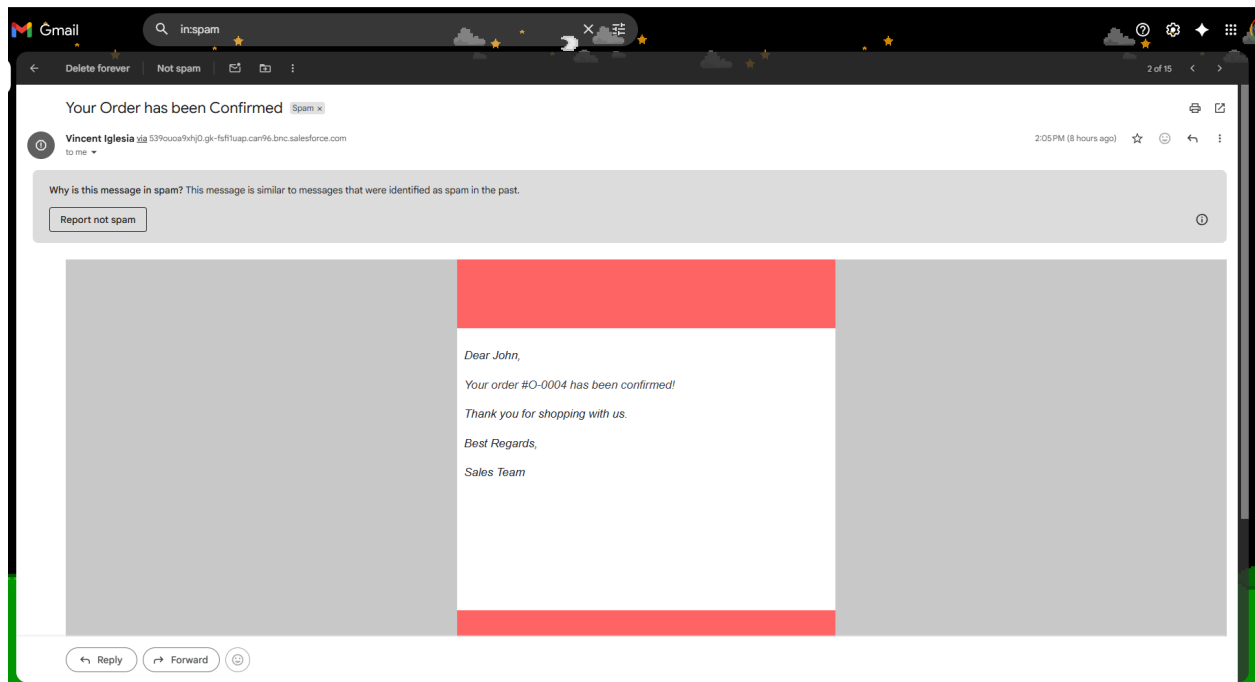

Figure 14. Order Confirmation Template

Low Stock Alert Email

Type: Text.

Subject: "Low Stock Alert Email."

- This simple text email is sent to the inventory team to warn them when a product's stock level drops too low, so they can restock.

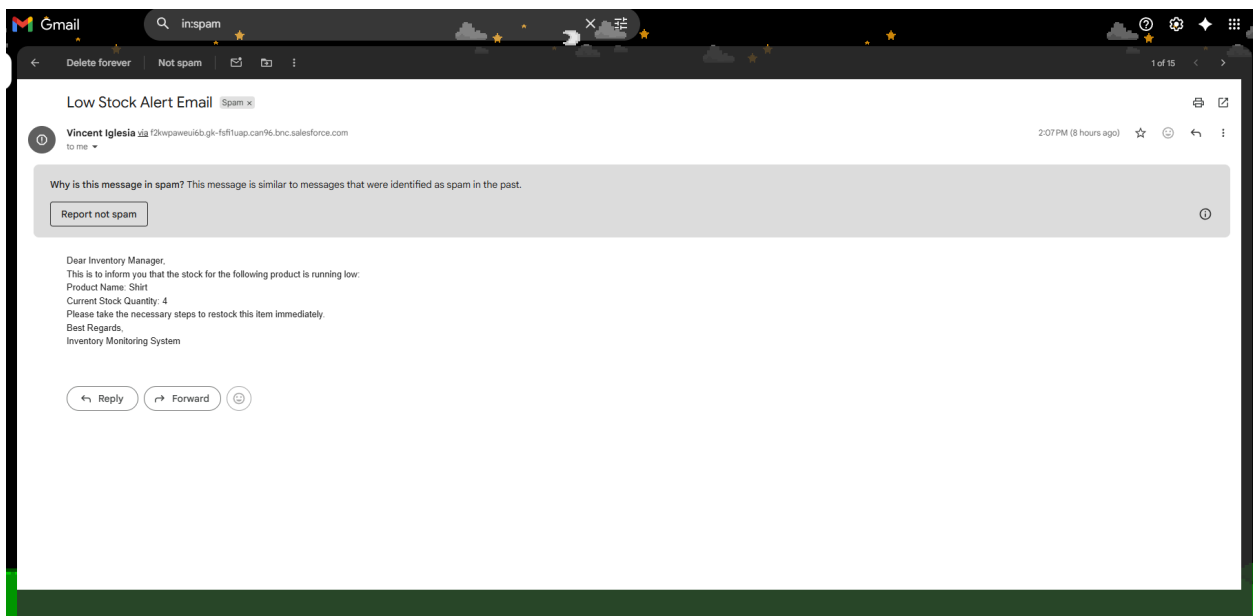

Figure 15. Low Stock Alert Template

Loyalty Program Email

Type: HTML (using Classic Letterhead).

Subject: "Loyalty Program Email."

- This email is sent to customers to inform them about the benefits of the loyalty program, such as Gold or Silver status rewards.

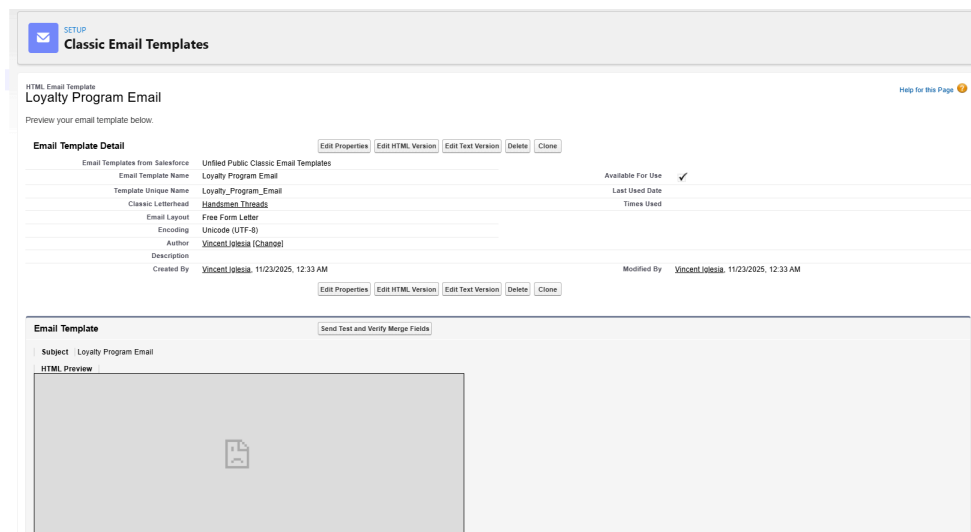

Figure 16. Loyalty Program Template

3. Email Alerts and Flows

We used Salesforce automation tools to make the system perform tasks automatically, saving us manual work.

Order Confirmation Email Alert + Record-Triggered Flow

- This flow waits for a change in the HandsMen Order record. When the "Status" field is changed to "Confirmed," the flow starts.
- It automatically triggers the "Order Confirmation Email Alert," which sends the confirmation email to the address in the "Customer Email" field.

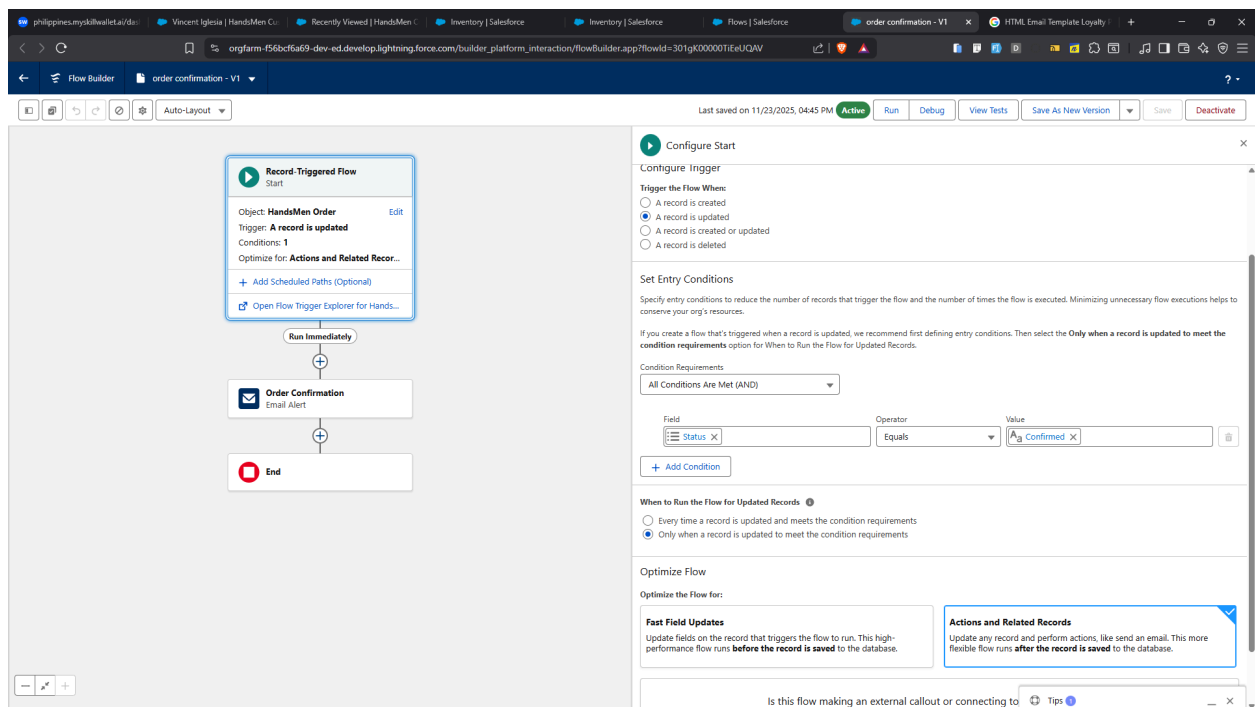

Figure 17. Order Confirmation Flow Canvas AND Flow Start Condition

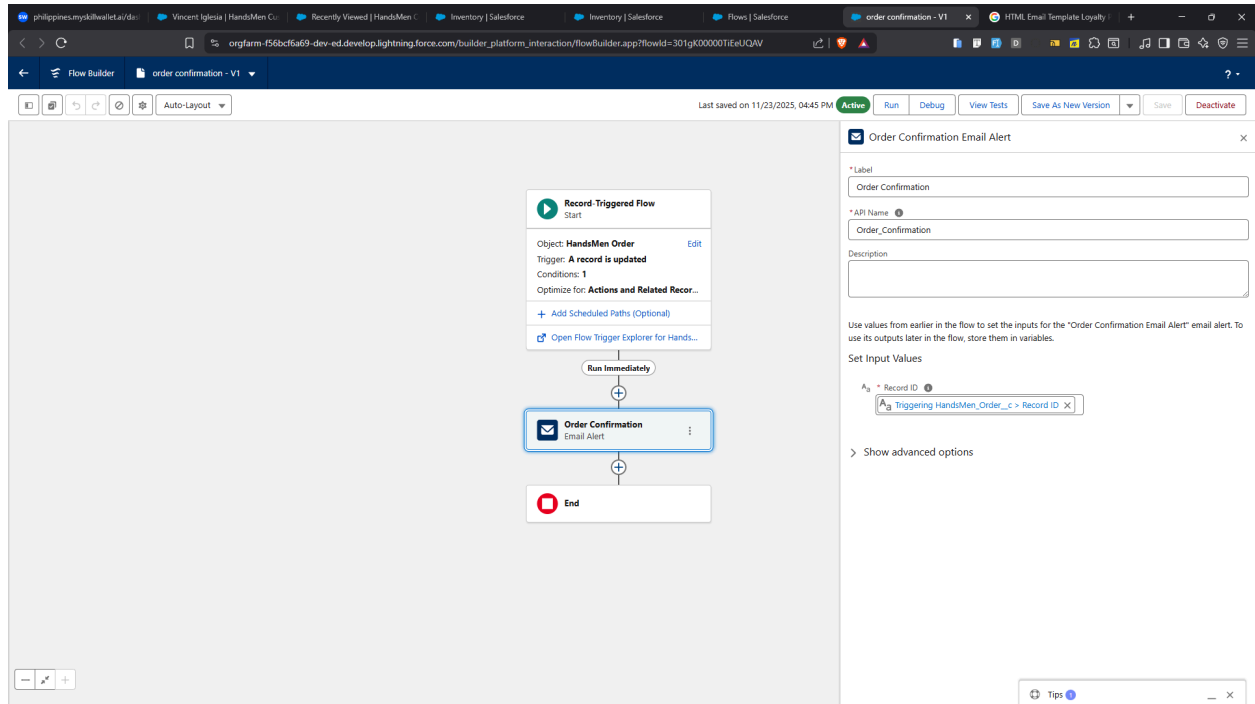

Figure 18. Email Alert Setup

Low Stock Alert Flow

- This flow runs whenever an Inventory record is created or updated.
- It checks if the "Stock Quantity" is less than or equal to 10.
- If the stock is low, it immediately sends the "Low Stock Alert Email" to the inventory team so they know to restock.

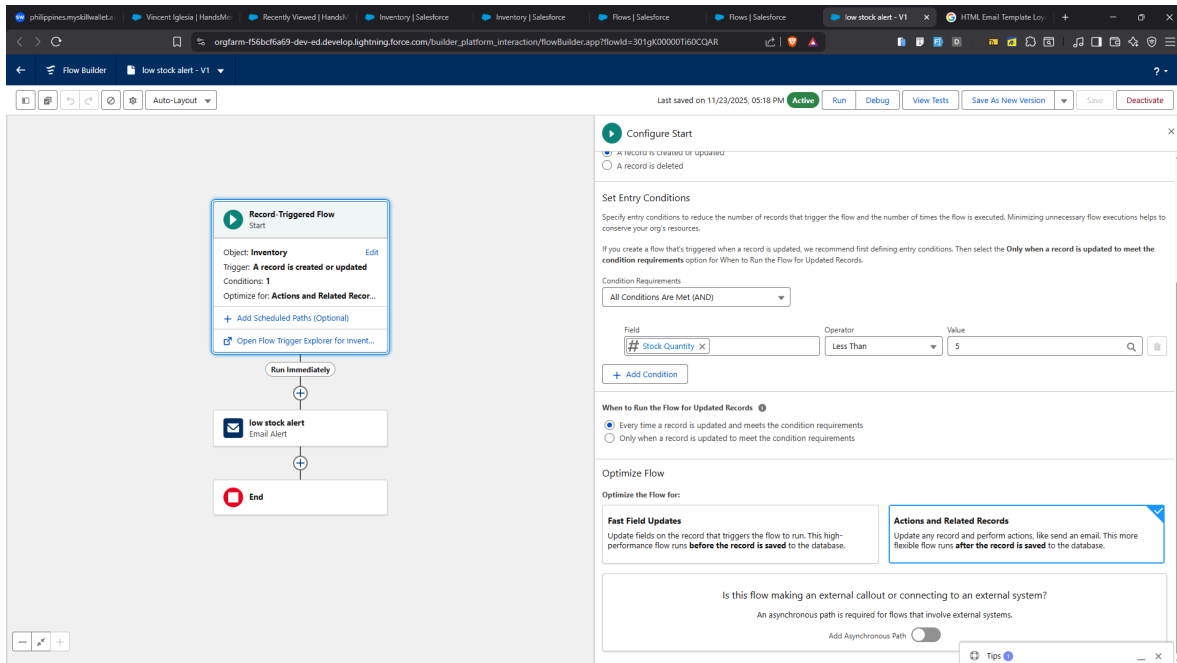

Figure 19. Low Stock Flow Canvas
(Shows the flow checking for stock quantity ≤ 10 .)

Scheduled Flow (Loyalty Program Flow)

- This flow is set to run automatically every 12:00 am daily.
- It scans all customer records and checks the "Total Purchases" field. Based on the total amount spent, it automatically updates the customer's "Loyalty Status" then send an email to customers.

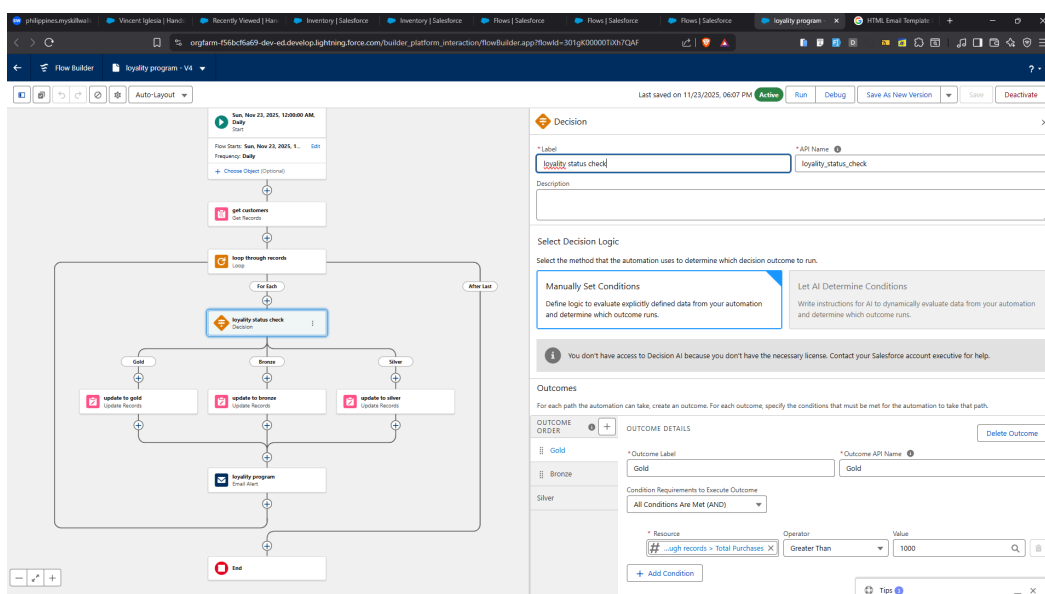

Figure 20. Scheduled Flow Properties

(Shows the schedule settings for the loyalty program email automation.)

4. Apex Triggers

We used custom Apex code to handle complex calculations and automatic updates that standard tools couldn't do.

Apex Trigger 1: Order Total Calculation

- Before an order is saved (inserted or updated).
- It looks up the price of the selected product and automatically calculates the Total Amount by multiplying the Price by the Quantity (Total = Price × Quantity). This ensures the order total is always correct without manual math.

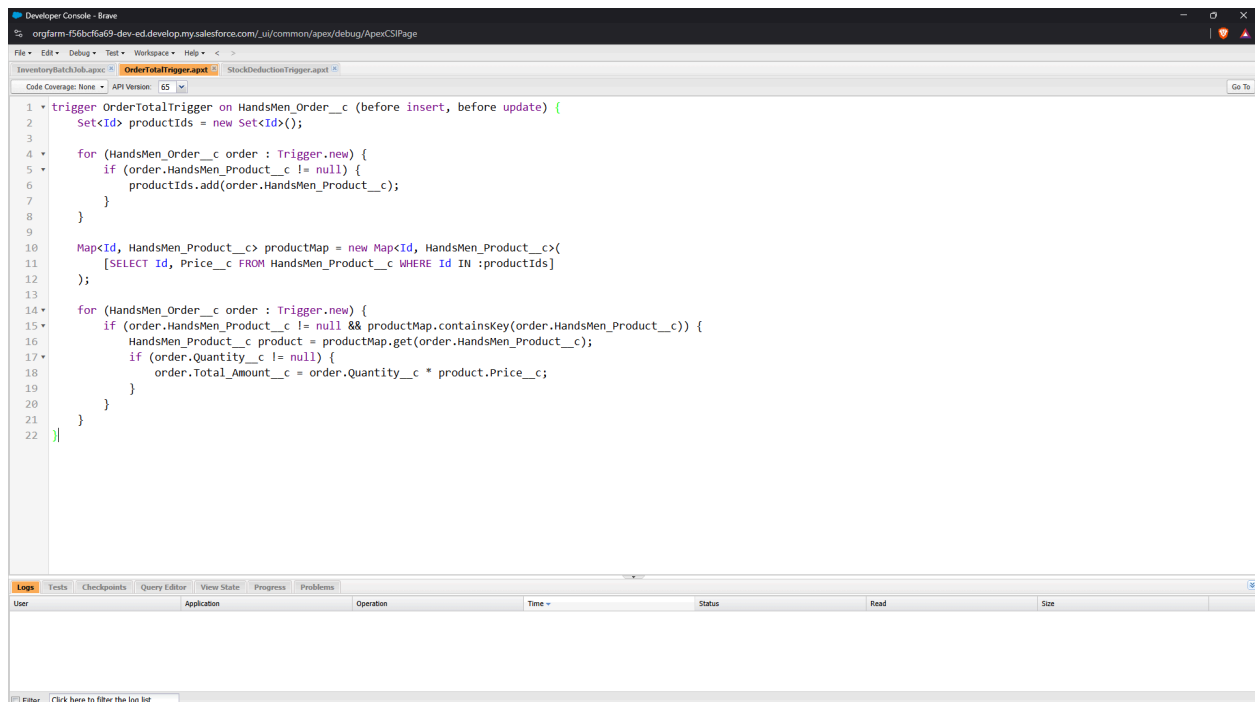

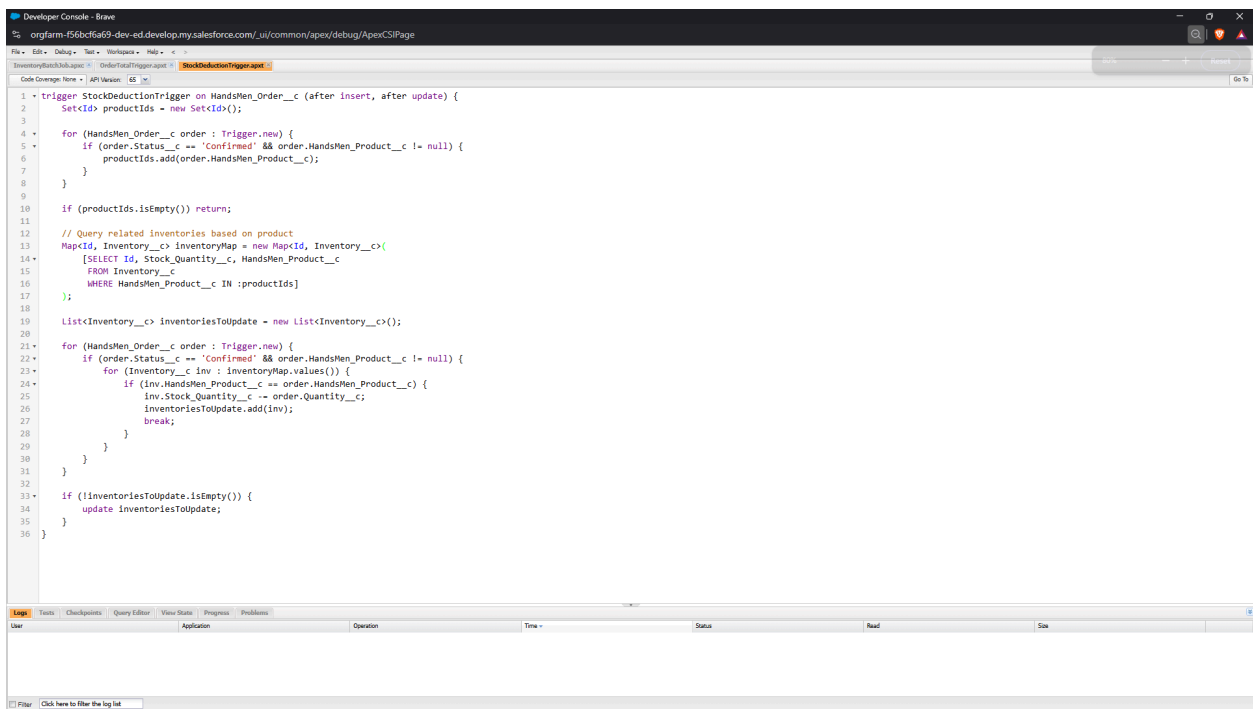

Figure 21. Order Total Trigger Code

(Shows the logic for calculating price times quantity.)

Apex Trigger 2: Stock Deduction

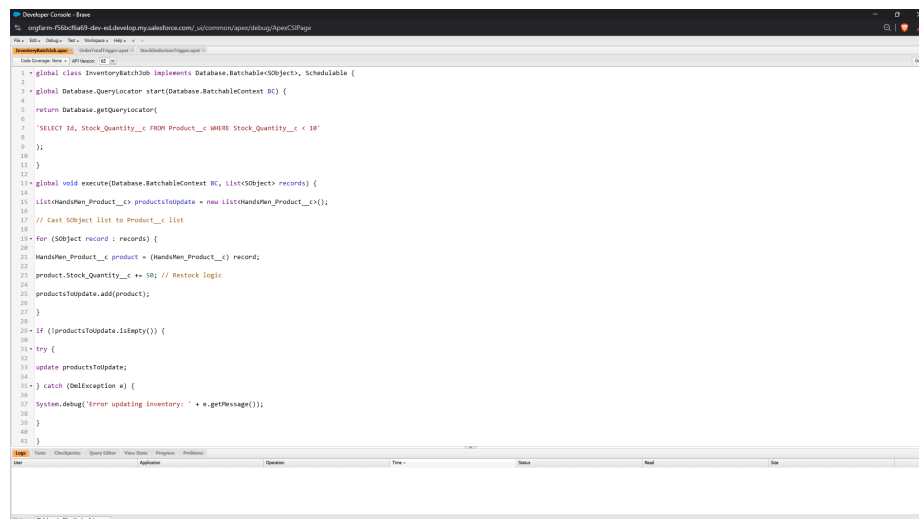

- It runs After an order is saved (inserted or updated).
- It checks if the order status is "Confirmed." If it is, the trigger automatically subtracts the order quantity from the Inventory Stock Quantity. This keeps our inventory numbers accurate in real-time.

*Figure 22. Stock Deduction Trigger Code
(Shows the logic for reducing inventory when an order is confirmed.)*

Apex Class 3: Inventory Restock Batch Job

- This is a scheduled job (e.g., nightly or weekly).
- It searches for all products where the Stock Quantity is less than 10. For every low-stock product found, it automatically adds 50 items to the stock (auto-restock). This prevents us from running out of popular items

*Figure 23. Inventory Restock Job Code
(Shows the batch job that adds 50 stock to low-inventory products.)*

Phase 3 – App, UI, Security, and Users

1. App Manager and Navigation

We created a custom app to make it easy for employees to find everything they need in one place.

- **App Name:** HandsMen Threads (Lightning App).
- **Tabs Added**
 - We included tabs for all our custom objects: HandsMen Customer, HandsMen Order, HandsMen Product, Inventories, and Marketing Campaigns. We also added standard tabs like Reports, Dashboards, Accounts, and Contacts.

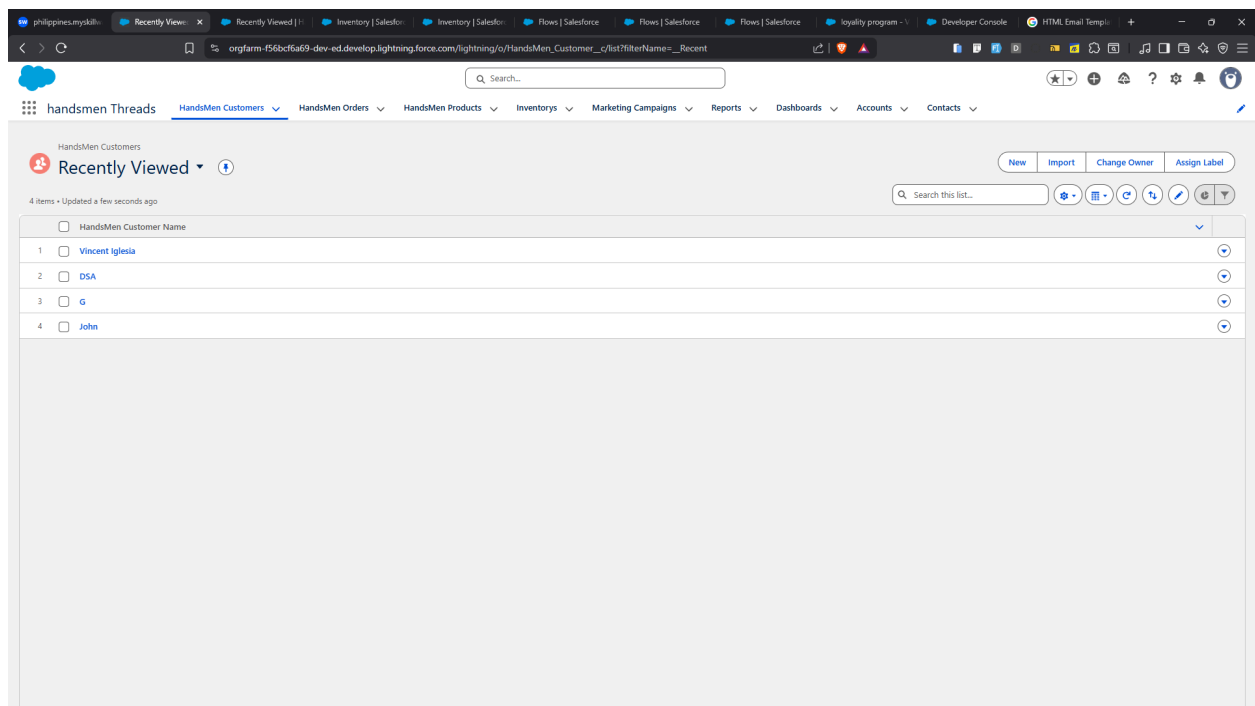

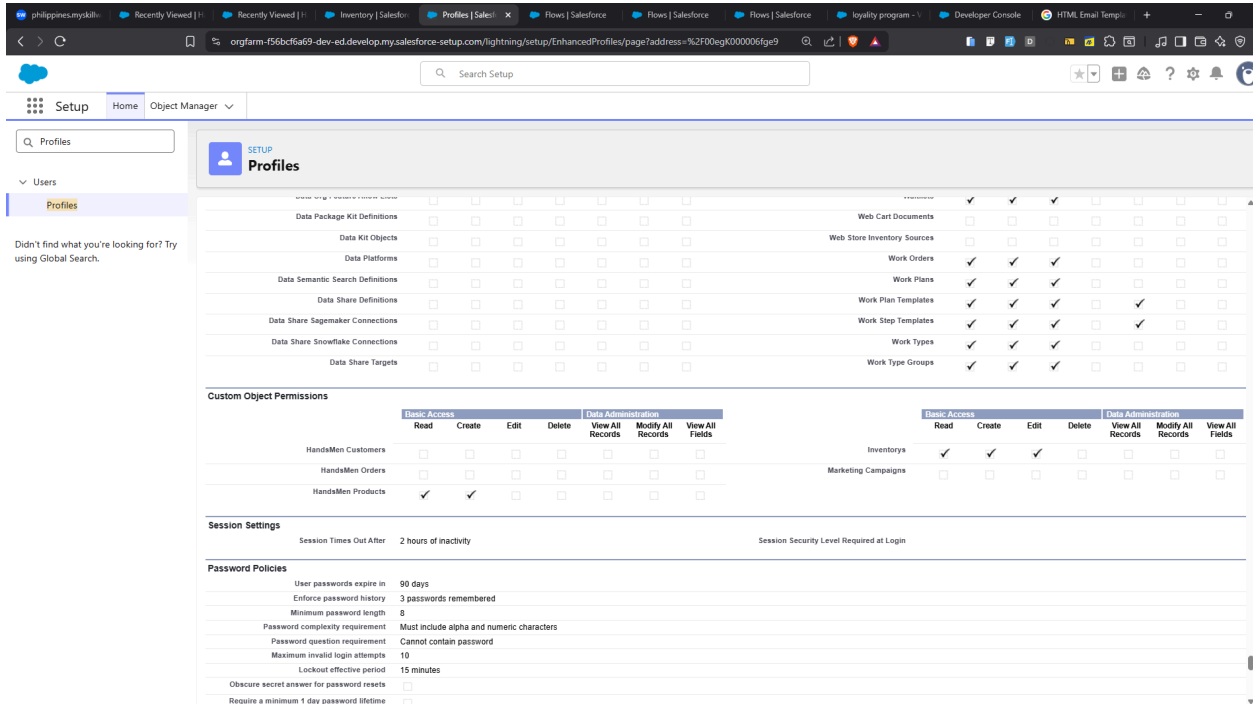

Figure 24. HandsMen App Launcher

2. Profiles, Roles, and Permission Sets

We set up security rules to ensure that employees can only see and change the data they are supposed to.

- Profile: Platform One
 - This profile is based on the "Standard User" but customized for our team.
 - Permissions: It gives Read and Create access to the "HandsMen Product" object and Read, Create, and Edit access to the "Inventory" object.

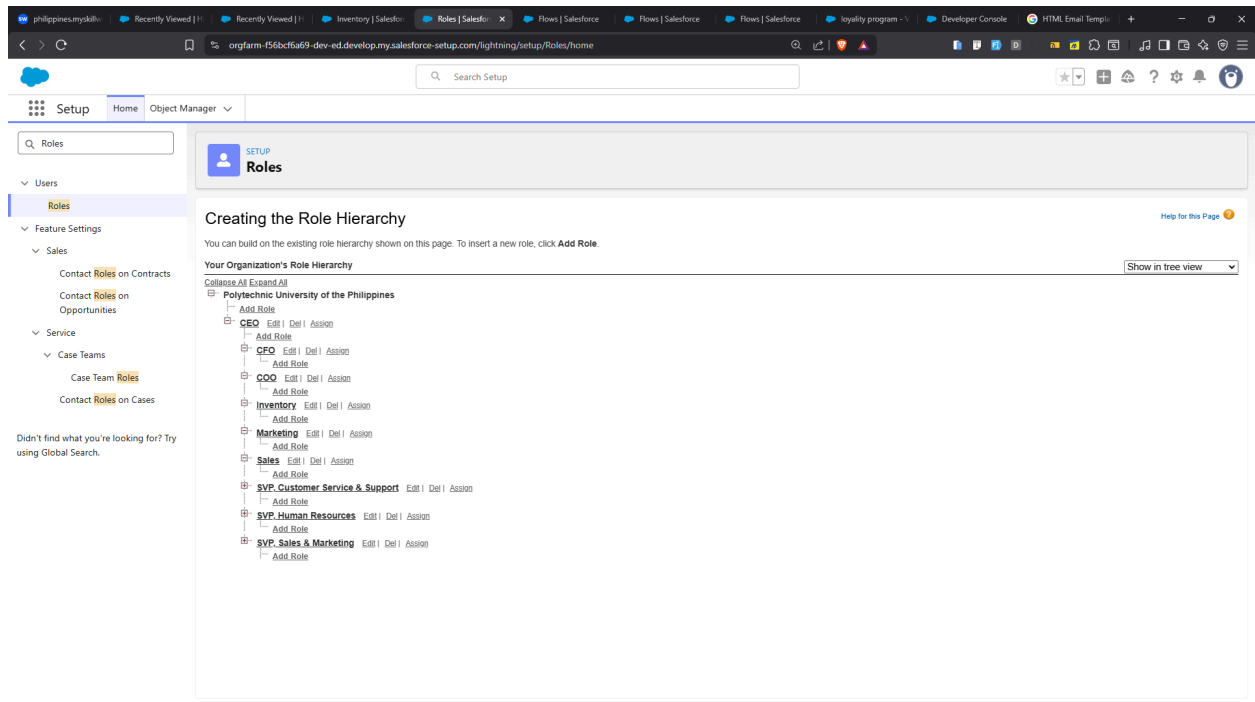

*Figure 25. Platform One Profile Permissions
(Shows the object permission settings for the custom profile.)*

3. Roles

We built a hierarchy with the CEO at the top.

- Under the CEO, we have three teams:
 - Sales: Handles customer and order data.
 - Inventory: Handles stock and warehouse data.
 - Marketing: Handles campaign planning.

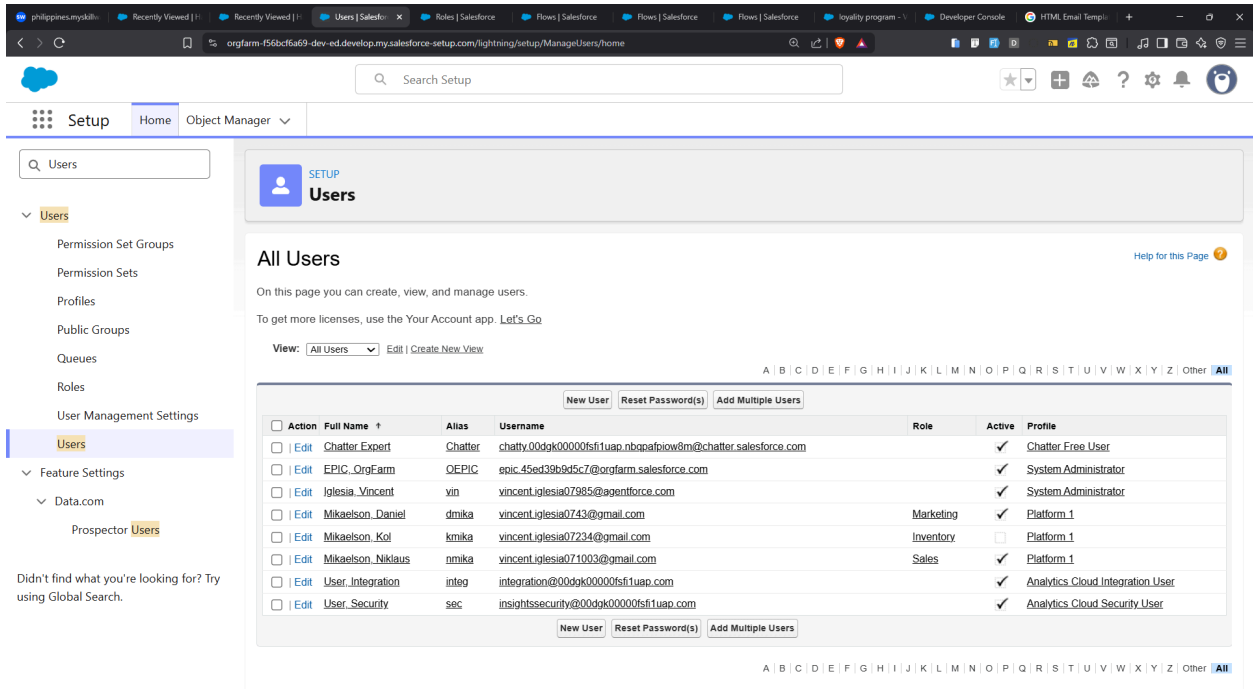

*Figure 26. Role Hierarchy Tree
(Shows the CEO role with Sales, Inventory, and Marketing roles underneath.)*

4. Users

We created three test users to represent different employees:

- Nicholas Miklson: Assigned the Sales role and Platform One profile.
- Co Miklson: Assigned the Inventory role and Platform One profile.
- Daniel Miklson: Assigned the Marketing role and Platform One profile.

*Figure 27. User List
(Shows the list of active users and their roles.)*

5. Permission Sets

We used permission sets to give extra access to specific users without changing their main profile.

- **Sales Permission Set**

Gives full access to "HandsMen Customer" and "HandsMen Order" for the sales manager.

- **Inventory Permission Set**

Gives Read/Edit access to "HandsMen Product" and "Inventory."

- **Marketing Permission Set**

Gives Read access to "HandsMen Customer" and Edit access to "Marketing Campaign."

IV. Conclusion

As a 4th year BSIT student, this project has been a valuable experience in applying the technical concepts I learned in school to a real-world business scenario. I built a complete CRM system for HandsMen Threads that uses custom objects to organize data, security settings like profiles to protect sensitive information, and automation tools like Flows and Apex triggers to reduce manual work. This system helps the business by centralizing customer and inventory data, ensuring that the right teams have access to the right information while improving efficiency through automated order confirmations and stock alerts. Working on this project deepened my understanding of database management and system architecture, which are core subjects in my IT curriculum. I also developed practical skills in backend development and quality assurance by writing Apex code and testing validation rules. Overall, this project bridged the gap between my academic studies and professional software development, preparing me for a future career in CRM administration and system development.
